PROJECTS

Employee Management — *Python*

The Employee Management System is an application that allows the HR manager to handle all Enterprise activities. The ability to manage various employee details make this system very flexible and convenient. It is difficult to manage the entire activities manually on paper. This application gives the power and flexibility to manage the entire system from a single system with help of python.

E-Commerce Website — *Django*

E-Commerce websites are online portals that facilitate online transactions of goods and services through means of the transfer of information and funds over the Internet. This website is design using django framework
